

Is Your Pulse Ox Power Hungry?

24 AA batteries to get 100 hours from Datex-Ohmeda TuffSat®

12 C-Cell batteries to get 100 hours from BCI® 3301

NONIN® gives you 100 hours with just 6 batteries

A little power goes a long way with NONIN.

Power hungry pulse oximeters eat up time, money and the environment. But a NONIN pulse oximeter with high performance and low power draw is the only handheld that runs 100 hours with just six AA batteries. Competitors' pulse oximeters use 2-4 times as many batteries and that adds up to more frequent battery changes, higher battery costs and greater recycling concerns.

Review our complete comparison details at www.nonin.com/100hours

Superior engineering inside every NONIN pulse oximeter results in more reliable and durable pulse oximeters that work in every patient situation—while using less power.

Failure in the field is not an option.

Choose NONIN.
