Safer, More Effective, and at least \$20,000 less than a laser!

We are offering the most advanced professional skin treatment & hair removal product available today. Our system delivers a changeable sequence of very rapid short pulses of light energy. Unlike other pulsed light systems, it can change the number of pulses, their length or duration, and most importantly the space of delay between pulses. Properly used, our unit takes regular pulsed light to new levels of effectiveness and safety.
