Cryosurgical Skin Treatment Device

The CryoProbe™ offers the most advanced cryosurgical technique for unparalleled freezing power combined with pinpoint accuracy. It allows easy & effective treatments without anesthesia for most benign skin lesions including condylomas, fibromas, angiomas, brown spots, seborrheic and actinic keratosis, verrucae vulgaris, HPV and much more. It's also a great value as it is maintenance free, uses economical nitrous oxide cartridges, minimizes treatment time and requires no follow-up care.

NEW Benchtop Chemistry Analyzer

The cobas c 111 analyzer offers laboratories or work areas with workloads of 10 to 50 samples per day a compact solution for clinical chemistry, electrolyte and homogeneous immunoassay testing. It produces high-quality patient results that are comparable to results of serum work area (SWA) systems from Roche Diagnostics. The cobas c 111 analyzer is designed to fulfill the important needs of integrated laboratory networks serving outpatient, emergency departments and clinics, and private laboratories serving primary care physicians.

CLIA-Waived Comprehensive Metabolic Panel

The FDA has granted waived status under CLIA regulations for 4 additional analytes, that subsequently allows the waived status of 3 additional complete chemistry panels, including the Comprehensive Metabolic Panel, Basic Metabolic Panel and Electrolyte Panel. With these new CLIA waived panels, POL's can now conduct lab-accurate comprehensive health screenings with ease, efficiency and speed under a simple certificate of waiver.

Noninvasive Bladder Scanning For Primary Care

The BladderScan® BVI 9400 measures urinary bladder volume and post-void residual with 3D ultrasound. It helps diagnose urinary retention and evaluates many common urological conditions and prevents unnecessary catheterization. It eliminates unnecessary trauma to patients, reduces rates of nosocomial urinary tract infection and helps monitor post-operative recovery and differentiates between types of incontinence to determine appropriate care. Helps evaluate need to catheterize during intermittent catheterization. Reduces costs and saves time.

CLIA-Waived A1c Analyzer

This A1c Point of Care analyzer is a fully automated system designed for simplicity, convenience and speed in near patient testing, providing results while the patient waits. The in2it™ assay requires only 10µL of capillary or venous blood and utilizes boronate affinity chromatography for results traceable to the worldwide DCCT reference. The in2it™ is FDA cleared for prescription home use, CLIA waived, and NGSP certified.
